Bill,

I appreciate the response and look forward to the information.

I spoke with John Jarvis, WV American Water – Water Quality Specialist and Sean Graves – Operations Officer yesterday evening, and they reviewed their stage two testing protocols with me.

They are scheduled to conduct stage two sample collection on Monday and they will take additional samples at the stage two locations for testing for MCHM and PPh.

I will also discuss with Walt and JD today.

I look forward to receiving the additional information from you when you have the opportunity.

I will be working with Interagency partners in the near future in my normal capacity as CBRN Response Enterprise Program Director to develop lessons learned from this event to include gap analysis and potential doctrine and education development across the Interagency community.

Thanks

It was a pleasure meeting with you yesterday and I really appreciate all of the hard work the guard has done in support of the State and getting the drinking water distribution system sampled and helping restoring confidence in the quality of the water.

I mentioned the stage two regulation which is part of a group of rules to look at disinfection byproducts (DBPs) The rule required the water systems to determine the oldest age of water in a system and sample at different points in the system in order to monitor for DBP formation.

This could be a starting point but probably only provides a limited set of locations. I would recommend discussing with JD Douglas and Walt Ivey. JD is part of the Area Wide Optimization Program and knows treatment and this system well. Also important from my brief discussions with WV Am water would to include them in the discussion. Their system is quite complex with many pressure zones which would be important in determining a monitoring plan.

When I get back to the office I will send you more on Stage two. I think that rule would be a good place to start but would need input from the State and system operators to enhance

Thanks

Bill
